Education

Hanoi University of Science and Technology

September 2014 - July 2020

Information System Design & Management

GPA: 7.21/10 - Good

Skills

Architecture & Design Patterns

API & Backend Intergration

Data Persistence & Offline Support

AI-Augmented Development

CI/CD & Release Management

Performance Optimization

Languages

French	TCF B1 (2019)
English	TOEIC 400

Objective

My goal is to become a Mobile Team Leader: Building high-quality applications using Flutter with a focus on performance, scalability, and maintainability. At the same time, I aim to expand my skills to become a Fullstack Developer in order to have a more comprehensive perspective in system and product development.

Work experience

Mobile Developer Flutter **November 2021 - Present**

NextPay Digital Transformation Group JSC

NextPharma – Pharmacy Management Application: A system that digitizes medicine trading to save time, cut costs, and boost efficiency between pharmacies and suppliers.

- **Purchasing app (for Pharmacies):** Search & order drugs from multiple suppliers, manage orders, track transaction history, receive promotions, manage debt & imports.
- **Sales app (for Suppliers):** Manage products, update prices & stock in real time, receive & process orders, track deliveries, revenue statistics, customer debt reports.

NextShop – Retail Management Application: A sales management solution helping stores track business activities and manage inventory effectively on mobile devices.

- Built product management flows covering variations, SKU, line items, warehouse inventory, and stock-related operations
- Implemented standard and quick sales order creation, order management, and invoice printing flows
- Developed debt tracking, revenue tracking, sales reporting, statistics, chart visualization, and data export features

Next360 – Merchant Information Management Application: A super-app for merchants integrating sub-apps in the NextPay ecosystem (NextShop, NextPharma, mPOS, NextLend, etc.).

- Developed merchant information, store information, and service registration flows for NextPay ecosystem applications
- Built business performance tracking, store revenue statistics, and merchant revenue overview screens
- Integrated REST APIs and MobX-based state handling for merchant data, service status, and reporting features

VimoWork – E-Wallet Application: An e-payment app allowing users to top up, pay for services, shop online, transfer & withdraw money.

References

- Hoang Anh Tuan
- Position: Mobile Developer

- Set up base app structure, core wallet screens, and reusable UI patterns for financial service flows
- Developed mobile top-up, utility payments, wallet deposit, withdrawal, transfer, and online shopping features
- Built transaction history, user information management, and service payment tracking screens

mPOS – Payment Solution Application: Comprehensive payment solution for individuals & businesses accepting multiple payment methods (credit/debit card, QR code, e-wallet).

- Integrated installment payment flows with Flutter and mPOS SDK for credit card-based payment scenarios
- Implemented QR code payment generation, payment method handling, and transaction status updates
- Built notification management and payment-related update flows for merchants and business users

Tingbox.vn (formerly MPOS360) – Merchant Management Application: A management app for mPOS partners to track transactions efficiently and broadcast transaction alerts via MQTT.

- Set up base app structure, reusable core screens, and main navigation for long-term maintainability
- Implemented registration, login, merchant onboarding, user information, and store management flows
- Built Tingbox device management, bank account management, notification management, device transfer, and account update features
- Integrated MQTT-based real-time payment alerts and transaction notification handling

Android Developer **June 2019 - June 2020**

EPR Software JSC

Go Now: Ride-Hailing application

- Developed ride booking and trip request screens
- Built user profile and account management features
- Implemented ride history and activity tracking screens
- Worked on notifications for ride and app updates
- Supported Android UI, API handling, and feature integration
